Geography

GEOGRAPHY INTRODUCTION

Geography is a focus within the curriculum for understanding and resolving issues about the environment and sustainable development. It is also an important link between the natural and social sciences. As pupils study geography, they encounter different societies and cultures. Studying geography creates a global citizen. Those who know geography better understand the *interdependence of our world* and how we are connected through location, place, movement, region, and human-environment interactions. Think about it. As we develop our understanding of the important themes of geography, we also help *build awareness for cultural diversity*—how and why people live the way they do. Students need to understand this information in our global society.

To become a real geographer, you need to open your eyes and learn about the world outside the classroom.

Essential summer reading

Prisoners of Geography by Tim Marshall

The following document on water insecurity needs to be read and understand the key concepts and terms.

Essential summer viewing/listening

Look at all the YouTube links in the document on each case study for the water insecurity unit.

Superpowers:
