

## CURRICULUM MAP: Year 10, Autumn 1

### Learners must be taught how to:

- interpret client requirements for pre-production (e.g. purpose, theme, style, genre, content) based on a specific brief (e.g. by client discussion, reviewing a written brief, script or specification)
- identify timescales for production based on target audience and end user requirements
- how to conduct and analyse research for a creative digital media product, i.e.:
  - o using primary sources
  - o using secondary sources
- produce a work plan and production schedule to include:
  - tasks
  - activities
  - work flow
  - timescales
  - resources
  - milestones
  - contingencies.

### Learners must be taught:

- the importance of identifying the target audience and how they can be categorised, i.e.:

Gender  
age  
ethnicity  
income  
location  
accessibility

- the hardware, techniques and software used for:

digitising paper-based documents  
o creating electronic pre-production documents  
the health and safety considerations when creating digital media products (e.g. use of risk assessments, location recces, safe working practices)  
legislation regarding any assets to be sourced, i.e.:  
Copyright  
Trademarks  
intellectual property  
how legislation applies to creative media production, i.e.:  
data protection  
privacy  
defamation  
certification and classification  
use of copyrighted material and intellectual property.

Task 1 – Investigating Digital Graphics Learning Outcome (LO) 1 is assessed in this task.

Before creating a digital graphic, students need to investigate the purpose and properties of digital graphics.

- investigate how and why digital graphics are used in a range of sectors
- identify the purpose of digital graphics. Identifying the properties of digital graphics
- the properties of digital graphics which affect their suitability and compatibility with the intended purpose
- file formats for different types and uses of digital graphics
- investigate how different purposes and audiences would influence the design and layout of digital graphics.

### Learning Outcome (LO) 2 is assessed in this task.

In planning for the product students will:

- consider the client's requirements and how these are specified
- consider the target audience for the digital graphic
- decide on a visual style and composition of the digital graphic.
- identify what activities must be completed to create the digital graphic
- estimate how long each activity will take
- identify the workflow sequence needed to create the digital graphic
- describe the assets and resources you will need to create the digital graphic.
- produce a visualisation diagram of the digital graphic.
- explain any legal issues and restrictions that need to be considered when creating the digital graphic.

### Learning Outcome (LO) 3 is assessed in this task.

Students will need to produce the digital graphic using a range of tools, techniques and assets to ensure it is suitable for its intended uses.

- obtain the assets required for the digital graphic
- re-purpose and store the assets to ensure their technical compatibility with the intended digital graphic.
- use a range of tools and techniques from the image editing software to combine the assets into the final graphic
- save both versions of the digital graphic in suitable formats as specified in the brief
- submit both digital graphic versions in an electronic format. The final graphics in their intended digital format must be supplied with the portfolio of evidence.

Now the digital graphic has been produced, students need to consider whether they have met all the requirements of the initial brief.

They will also need to review the overall quality of the digital graphic and identify any improvements that could be made.

- review how well the digital graphic meets the client's requirements
- identify how the digital graphic could be improved
- describe areas for further development, giving reasons for your choices.

**Learners must be taught how to:**

- where different interactive multimedia products are used and their purpose, i.e.: websites, information kiosks, mobile phone applications, e-learning products
- key elements to consider when designing interactive multimedia products, i.e.: colour scheme, house style, layout, GUI (graphical user interface), accessibility
- the required hardware, software and peripherals to create and view interactive multimedia products
- the type of limitations caused by connections, bandwidth and data transfer when accessing interactive multimedia products
- file formats supported by different platforms (e.g. computer, smartphone).

**Learners must be taught how to:**

- interpret client requirements for interactive multimedia products (e.g. for informative, educational, testing or entertainment purposes) based on a specific brief (e.g. by client discussion, reviewing a written brief, or specification)
- understand target audience requirements for interactive multimedia products
- produce a work plan for an original interactive multimedia product, to include:
  - o tasks
  - o activities
  - o workflow
  - o timescales
  - o resources
  - o milestones
  - o contingencies
- plan the structure and features of an interactive multimedia product (e.g. non-linear navigation, screen size, interaction, rollovers)
- produce a series of visualisation diagrams to include: screen design (e.g. colour scheme, text, layout) o navigation features (e.g. GUI, menus, buttons, links) assets (e.g. images, graphics, sound, video, animation)
- identify the assets and resources needed to create an interactive multimedia product
- create and maintain a test plan to test an interactive multimedia product during production.
- how legislation (e.g. copyright, trademarks, logos, intellectual property use, permissions and implications of use) applies to assets (e.g. sound, video) to be used when creating interactive multimedia products, whether sourced or created.

### Learners must be taught how to:

- source assets to be used in an interactive multimedia product (e.g. graphics, sound, video, animation, navigation buttons/icons)
- create and re-purpose assets
- store assets to be used in an interactive multimedia product
- create an interactive multimedia product structure
- set up interaction and playback controls (e.g. navigation, rollovers, triggers, behaviours (e.g. pop-up messages))
- save an interactive multimedia product in a format appropriate to the software being used
- export the interactive multimedia product in a file format appropriate to client requirements
- how to use version control when creating interactive multimedia products.

### Learners must be taught how to:

- review an interactive multimedia product against a specific brief
- identify areas for improvement and further development of an interactive multimedia product.

## CURRICULUM MAP: Year 11, Autumn 1

### Learning Outcome (LO) 1 is assessed in this task.

Students need to explain the purpose of interactive multimedia products.

They need to:

- investigate the types of interactive multimedia products available and where they are used
- identify design principles used with interactive multimedia products
- identify the hardware, software and peripherals required to create and view interactive multimedia products
- identify the different types of connection which can be used to access interactive multimedia products
- explain the limitations of connections, bandwidth and transfer speeds required to access interactive multimedia products
- include suitable file formats for use on different platforms.

### Learning Outcome (LO) 2 is assessed in this task.

Students need to:

- consider the client requirements based on the brief
- identify the target audience, and what they will want from the interactive multimedia product.
- produce a work plan for the interactive multimedia product
- identify the resources which will be needed to create the interactive multimedia product.
- use appropriate planning techniques to identify the assets needed to create the interactive multimedia product
- create visualisation diagrams, identifying design principles to be used for the interactive multimedia product
- plan the structure and navigation of the interactive multimedia product.
- consider any legal issues and restrictions on the assets used, whether sourced or created.

### Learning Outcome (LO) 3 is assessed in this task.

Students need to:

- create assets to be used in the interactive multimedia product
- source assets to be used in the interactive multimedia product and save in an appropriate format
- re-purpose assets as needed and save using appropriate file and folder names.
- prepare the structure of the interactive multimedia product
- use multimedia authoring software to combine the assets and create the interactive multimedia product
- create the navigation system as planned
- add interactive features to the multimedia product
- save and export the interactive multimedia product in a suitable format that retains interactivity to meet the client brief
- produce and maintain a test plan throughout production. The final product(s) in their intended digital format must be supplied with the portfolio of evidence.

### Learning Outcome (LO) 4 is assessed in this task.

Now the interactive multimedia product has been produced, students need to consider whether you have met all the requirements of the initial brief. They will also need to review the overall quality of the product, and identify any improvements that could be made.

Students need to:

- review the interactive multimedia product
- describe how well it meets the client's requirements
- explain how and why the interactive multimedia product could be improved
- describe areas for further development giving reasons for your choices.
